DETAILED ACTION

Allowable Subject Matter

Claims 1-42 are allowed. Reference the applicant's Remarks/Arguments filed 06 July 2006 for reasons for allowance. Also as regards claim 34, the prior art made of record does not teach a method of binding a voice communication mode with a data communication mode during a communication session between a first party using a first mobile communication device and a second party using a second mobile communication device, at least the first mobile communication device having an image capturing means, the method comprising **establishing a voice communication link** between the first and second mobile communication devices using a voice communication mode, **suspending the voice communication link, transferring a data file to the second mobile communication device from the first mobile communication device using the data communication mode** (terminating the data communication mode) and automatically **resuming the voice communication link**. This claim language indicates the claimed first and second communication devices are limited to mobile communication devices (wireless) and it is clear the voice communication link (voice channel) and the data communication mode are different operations on different channels.

Conclusion

The prior art made of record and not relied upon but considered pertinent to applicant's disclosure includes: Coombes et al. (US 6,138,030), Gupte et al. (US 2002/0055350), Xiang et al. (US 2002/0122401) and Jiang et al. (US 7,092,370).
